ADD, DELETE OR MODIFY PROJECT PRODUCTS

- **PROJECT MODIFICATIONS:**

Activating a project step option, allows the software to add, delete or modify by default the various products included in this project step.

- **GROUND:**

The activation of the options of this step of the software makes it possible to select a ground there and to determine the location, the surface and its price. The software also calculates its excavation, confirms it landscaping, selects certain municipal services and installs all the services applicable to this land if necessary.

- **FLOORS:**

The options of this step can, with a simple click, add, delete or modify the floor products of each floor. He selects floor support products, selects or adds plywood, changes a wood floor for a concrete floor, selects insulation, modifies its thickness and installs everything that applies to the floors of the stages.

- **CEILINGS:**

The options of each step allow, with a simple click, to add, remove or modify each product of the ceiling. The options allow you to install blown wool or fibreglass, wood or metal slats by selecting its spacing, insulation panels, fire protection and install as needed everything that s applies to ceilings.

- **EXTERIOR WALLS:**

The options of these stages can add, delete or modify certain products of the exterior walls of each floor of the project with a simple click. Options change exterior siding, wall height and thickness, install gutters, and anything else that applies to exterior walls.

- **MACHINED WALLS:**

The options of this step of the software allow, with a simple click, to replace the conventional exterior walls of the project with machined walls by choosing from three models of machined walls.

- **ROOF:**

The options of this step of the software allow a simple click to add, delete or modify certain roof products. The options allow you to modify, for example, certain plywood, to install or not a protective membrane and to install everything that applies to the roof of the project.

- **SUBMISSION :**

The options of this step of the software allow, with a simple click, to replace the calculated products of the software by quotations coming from different suppliers. The options allow for example to modify the purchase orders of the gypsum group, the mechanical group or the group of interior finishing products or any other by supplier submissions.
