

## MODE OF OPERATION

The software contains the latent takeoff of thousands of models of buildings of 6 floors and less of wood or concrete containing the basic products (Time and material) used most often in the field of construction. The software contains different ways to achieve this. (Steps, options, formulas, products, prices, purchase order and suppliers)

- **STEPS:**

The software displays on the home page the 15 steps to be selected to constitute the project to be built. (Adjustments, foundations, basement, floors, balconies and concrete terrace, garage, rooms, roof and others).

- **OPTIONS:**

The options available at each step allow you to add, remove, modify or adjust all products depending The options available at each step allow you to add, remove, modify or adjust all products depending display of projects. The partial and available options of each step are: (Land (10 options), insulation (10 options), exterior walls (30 options), exterior cladding (10 options), floors (12 options), partitions and load-bearing walls (40 options), roof (50 options) and each room interior (100 options).

- **FORMULA:**

The software contains thousands of formulas integrated into the software and linked to the options of each project allowing the compilation and default display of the quantities and prices of each product of the project. The software transfers this data by default to the purchase orders displaying their location and distribution to each category of suppliers concerned.

- **PRODUCTS**

The software contains a list of products integrated into the software that can be used according to the options of the projects.

- **MASTER PRICE LIST**

The master price list integrated into the software regularly adjusts the price of products and the daily cost of all projects using this price list.

- **HOUSE PRICE LIST**

The new user copies the master price list, renames it and assigns it to a new project. The user himself modifies the prices of all the products concerned by this project. The software then transfers these new prices to any new project assigned to this price list. Any price list can be renamed and assigned to new projects.

- **SUPPLIER PRICE LIST**

The Internet user asks the supplier to transfer to him the prices of the products he can supply for these projects. By registering for the software, the supplier transfers its prices via the Internet to a specific project. The user returns directly to him the order forms concerning him without further intervention on his part.

- ORDER FORM

By subscribing to the software, the supplier without any action on his part receives directly via the internet all the purchase orders assigned to him. The purchase order determines the supplier, the quantity and the price of the products, their location, the floor and the delivery address of the order.

- VENDOR

The supplier registered in the software, without any action on his part, receives the purchase orders assigned to him via the internet. By using the software the supplier conversely can send a binding quotation of his products to the user.
