THIS FILE SHOWS THE PRODUCT MODIFICATION PROCESS AT THE DIFFERENT STEPS OF THE PROJECT

- **PROJECT MODIFICATIONS:** Activating a project step option, allows the software to add, delete or modify by default the various products included in this project step.

- **ADD A TERRAIN:** The activation of the options of this step of the software makes it possible to select a field there. They determine its location, area and price, calculate its excavation, confirm its landscaping, select the municipal services and install all the services applicable to this land if necessary.

- **FLOORS OF STAGES:** The options of this step of the software can, with a simple click, add, delete or modify the products of the floors of all stages. He selects floor support products, selects or adds plywood, installs a concrete floor, selects insulation, modifies its thickness and installs everything that applies to the floors of the floors.

- **STAGES CEILINGS:** The options of this step of the software can, with a simple click, add, delete or modify all the ceiling products. Options allow you to install or not blown wool or fibreglass, wood or metal slats and select the spacing between them, insulation panels, fire protection and install as needed everything that applies to ceilings.

- **EXTERIOR WALLS OF STAGES:** The options of this step of the software can add, delete or modify certain products of the exterior walls of the floors of the project with a simple click. Options change exterior siding, height and width, whether or not to install gutters, and install anything that applies to exterior walls.

- **CONVENTIONAL WALLS OR MACHINED WALLS:** The options in this step of the software allow, with a simple click, to replace the conventional exterior walls of the project with machined walls by choosing from three models of machined walls.

- **ROOF:** The options of this step of the software allow a simple click to add, delete or modify certain roof products. The options allow you to modify, for example, certain plywood, to install or not a protective membrane and to install everything that applies to the roof of the project.

- **PRODUCTS OR QUOTATION:** The options of this step of the software allow, with a simple click, to replace the calculated products of the software by quotations coming from different suppliers. The options allow for example to modify the purchase orders of the gypsum group, the mechanical group or the group of interior finishing products or any other by supplier submissions.

- **MODIFICATIONS BY VIDEO:** View the modifications made to certain products using 50 videos available in the software (For example: gypsum, paint, cabinets and others). On the home page of the software, a black circle is displayed accompanied by a white question mark. Click on this icon and select the one that interests you.
